Priyadharshini Balaji

MSc Business Analytics Candidate | Dublin City University

Dublin, Ireland · priyadharshiniblj25@gmail.com

[LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Profile

Full-time MSc Business Analytics student at Dublin City University with a BTech in Information Technology from Rajalakshmi Engineering College. Combines engineering fundamentals with analytics training — SQL, Python, machine learning, and data visualisation. Currently working on an industry analytics project with Safefood (Seafood Ireland) as part of the MSc practicum.

Education

MSc Business Analytics · 2025 – 2026

Dublin City University, Ireland

Relevant modules: SQL & Databases, Programming for Analytics, Data Mining & Machine Learning, Data Visualisation

BTech, Information Technology · 2021 – 2025

Rajalakshmi Engineering College, Chennai, India

Experience

Business Analyst — Applied Data & Software Engineering (Industry Project) · Jan 2026 – Present

Safefood, Dublin (Hybrid)

- Working on a real-world university-industry project in collaboration with Seafood Ireland, as part of the MSc Business Analytics practicum at DCU.
- Designing and developing data-processing workflows using programming fundamentals (loops, conditionals, functions, data structures) to clean, transform, and analyse structured datasets.

- Writing optimised SQL queries (joins, aggregations, subqueries) to analyse relational data and support business decision-making.
- Applying software engineering principles to build reusable, maintainable code for analytics and reporting.
- Translating business requirements into technical solutions and communicating findings to academic and industry stakeholders.

Industrial Android Application Development with IoT (Internship) · Jul 2023

NSIC, India

- Contributed to the development of an industrial Android application integrated with IoT sensors, bridging hardware inputs with a mobile interface.
- Gained exposure to end-to-end IoT-to-mobile workflows — hardware signals, data capture, and application-layer handling.

Projects

Customer Segmentation with RFM Analysis — Python, scikit-learn, Plotly

Segmented 1,000 synthetic retail customers into four actionable groups using RFM scoring and K-Means clustering. Built an interactive 3D visualisation to communicate segments to non-technical stakeholders.

Sales Forecasting Dashboard — Python, time series, Plotly

Built a 90-day sales forecasting pipeline with decomposition (trend, weekly seasonality, residual) and an 80% confidence band. Produced an interactive dashboard to surface daily, weekly, and peak-day insights.

ePortfolio Website — Quarto, Git, GitHub Pages

Designed and deployed a personal portfolio site with custom Sass styling, interactive Python visualisations, and continuous deployment.

Technical Skills

Programming & Query: Python (pandas, scikit-learn, Plotly), SQL, R

Data & BI: Excel, Power BI, Tableau

Tools & Workflow: Git, GitHub, Quarto, Jupyter, VS Code

Core Competencies: Data cleaning, exploratory analysis, statistical modelling, clustering, time series forecasting, dashboard design, stakeholder communication

Languages

English (fluent) · Hindi · Tamil
